

Water and Sanitization

This project is about water and sanitization in tamil nadu which gives a clarity about number of water resources and places where can we find good water resources

In this project, I divide water resoures into two groups i.e.,Corporatons and Municipality. Water resource places which comes under Corporatoinis are more compare to Municipality but quantity is more in water resource places which comes under municipality.

The place Thanjavur has more number of water resources which comes under Municipality and has less issues.Chengalpattu is in second position with more water resources under municipality.There is huge difference between number of water resources in Thanjavur and Chengalpattu.In Tirunelveli water resources are under either Cotporation or Municipality and water resources under municipality has more issues compare any other places.

Thanjavur has more number of Tanks compare to any other places.Tirunelveli has more number of ponds compare to any other places.Madurai has more number of ooranis compare to any other places.

From this project I conclude that Thanjavur has more number water bodies, if any of the places has water scarcity they can get from Thanjavur.
